SOURCE

- 1 Up to now, three I.G. Farben production groups have been transferred to Russia, specifically, two to Moscow and one to Gorki.
2. The manager of the more important group in Moscow is Dr. Herold, a disabled war veteran (lost one leg). This group is following the production program of the former Leuna-Werke for nitrogen, in addition to working on coal gasification. The staff consists of forty-two to fifty top ranking chemists and technical specialists.
- 3 The second group in Moscow comprises about the same number of top ranking personnel; this group is engaged in unspecified scientific research.
4. The third group in Gorki consists of about eighty qualified chemists and technicians. Apparently, members of this group serve as consultants to large plants in the field of industrial chemistry, where they furnish advice on improvements in production methods. This group in particular complains of bad treatment from the Soviets.
